Major Incidents reported during the day

August 18, 2023

1) Samanalawewa full load generation restricted, in order to comply with the operation constraints initiated by propagation of air bubbles at reservoir intake, which would further course for the possible formation of vortex at the same place, due to the severe depletion of Samanalawewa reservoir storage.

2) Kotugoda - Veyangoda 220kV cct 02 tripped from Kotugoda end and tripped and A/R and tripped again from Veyangoda end at 16:06hrs due to the operation of differential protection. At the same time, Matugama DPP tripped rejecting 9.8MW from the system and Mannar 11 nos. of WT tripped rejecting 33MW from the system due to the disturbance. Both plants resumed generation by 16:10hrs and 17:04hrs respectively. The cct was normalized at 20:13hrs

3) New Polpitiya 220/132/33kV T/F 02 tripped from all ends at 17:24hrs due to the operation of differential protection. The T/F was restored at 18:03hrs.
